Dear Researcher,
Greetings.

An article was received by us and we wish to inquire if you can create time to review the manuscript and send back to us within a week.

Please find the title and abstract below;

Title: Land use conversion effects on aggregation and erodibility of Alfisol soil of Abaji, FCT of Nigeria

Abstract
Land use conversion can affect natural ecological processes such as surface runoff and erosion. Therefore, it has potential to change soil stability. The study was carried out in Abaji local government of Federal Capital Territory. The objective was to determine the effects of land use conversion on soil properties, soil erodibility and the relationships among soil properties and some erodibility indices. Duplicate topsoil samples were taken by using steel cylinders auger at 60 different sampling points from three different land use types; 20 of them are in farmlands, 20 in rangelands and 20 in forestlands. Soil particle size distribution, loss of ignition and three erodibility indices were determined. Data were analyzed by using Pearson correlation analysis (at 95% significance level), and ANOVA. Dear Dr. Erika Beilicci,
Thank you for accepting our invitation to review with the Journal of Agricultural and Crop Research, JACR.
Please find attached the "Full Text" of the article [JACR(Sept. 2016)155]. **Instruction for authors** including the **Reviewer's Evaluation Form**. You may present your evaluations the way you deem fit. If you wish to correct parts of the article itself, please indicate your corrections with a different color (for example, red for addition and blue for deletion).
I am looking forward to your comments within a week time.
Kindly let us know if you have received this mail.

Regards
